

ARMOR SHIELD® Edge Protector Pads

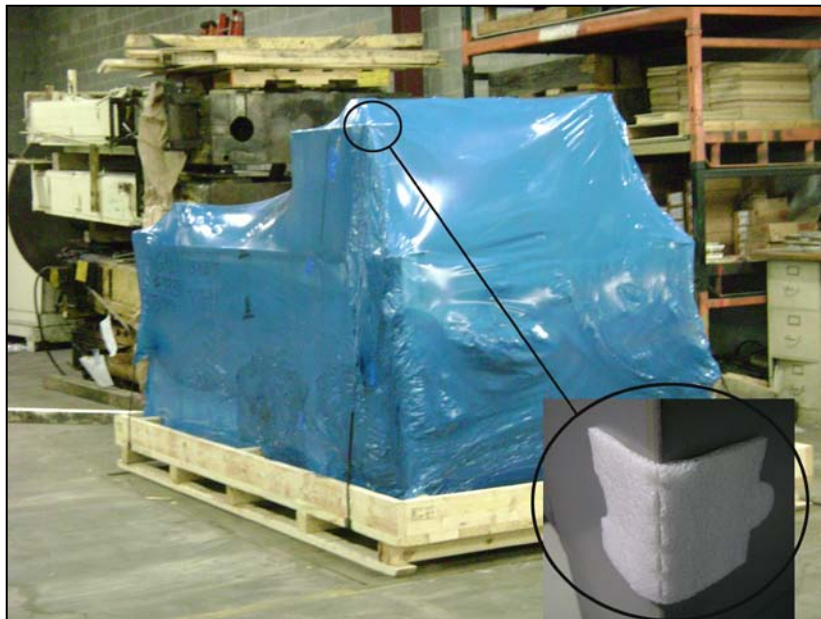

*Protect film from sharp corners & edges
with adhesive backed foam pads!*

PRODUCT DESCRIPTION

ARMOR SHIELD® Edge Protector Pads are die-cut polyethylene foam pads with one-side removable adhesive. Foam pads are ideal for sharp corner or edge protection and are the easiest and most economical solution to keeping overwrap films from tearing and puncture holes. Each pad is die-cut to 2 ½" x 4 ½" with a perforation in the center for easy foldover on edges and around corners. Specialty adhesive is aggressive enough to stick to most surfaces but removes easily and does not leave a mark. Die-cut pads are white and come 16/sheet.

APPLICATIONS – USAGE

- Foam pads do not contain any corrosion inhibitors
- Ideal for large equipment export where sharp edges cause ripping in protective film
- Specialty adhesive allows for superior adhesion to many surfaces yet is easily removed when job is completed
- Inert foam pads do not contribute to corrosion potential unlike corrugated pads or other moisture bearing products used as a cushioning protector
- Available in die-cut pads 2 ½" x 4 ½" (16 pads/sheet)
