Note: In some instances, above product comparisons are not identical in specification and may not be exact duplicates. In the case of Multi Purpose Inhibitors, an ARMOR WRAP® VCI product formulated specifically for ferrous metal applications may be the most appropriate product. Companies such as Cortec and VCI2000 have ONLY a Multi Purpose Inhibitor formulation. Therefore, even if the application is for a ferrous metal, a MPI product is used because it is all they manufacture. This chart is intended to be used as a *starting point* for the purpose of determining which ARMOR product may best be suited for your particular application. It is recommended that you test your product's compatibility with our ARMOR Protective Packaging™ products in vapor phase and as a contact inhibitor.
