

# BULK PACKAGING RECOMMENDATIONS

## Small Quantity of Parts in Box

**IDEAL FOR:** bearings  
clutch components  
steering parts  
valves

For a small quantity of parts inside a box simply line the box with an ARMOR POLY® VCI Bag. When packing is completed, close and seal bag immediately to contain VCI vapors inside of pack. Adequate sealing methods include heat seal, tape, twist-tie staples or folding the bag over. For export or longer term storage, seal bag as outlined above as opposed to simply folding over.

Please note that these recommendations are based upon "Best Practices" developed by ARMOR Protective Packaging® professionals in conjunction with our customers. Since every situation is different, ARMOR recommends conducting a "real life" test shipment for best results.
