

BULK PACKAGING RECOMMENDATIONS

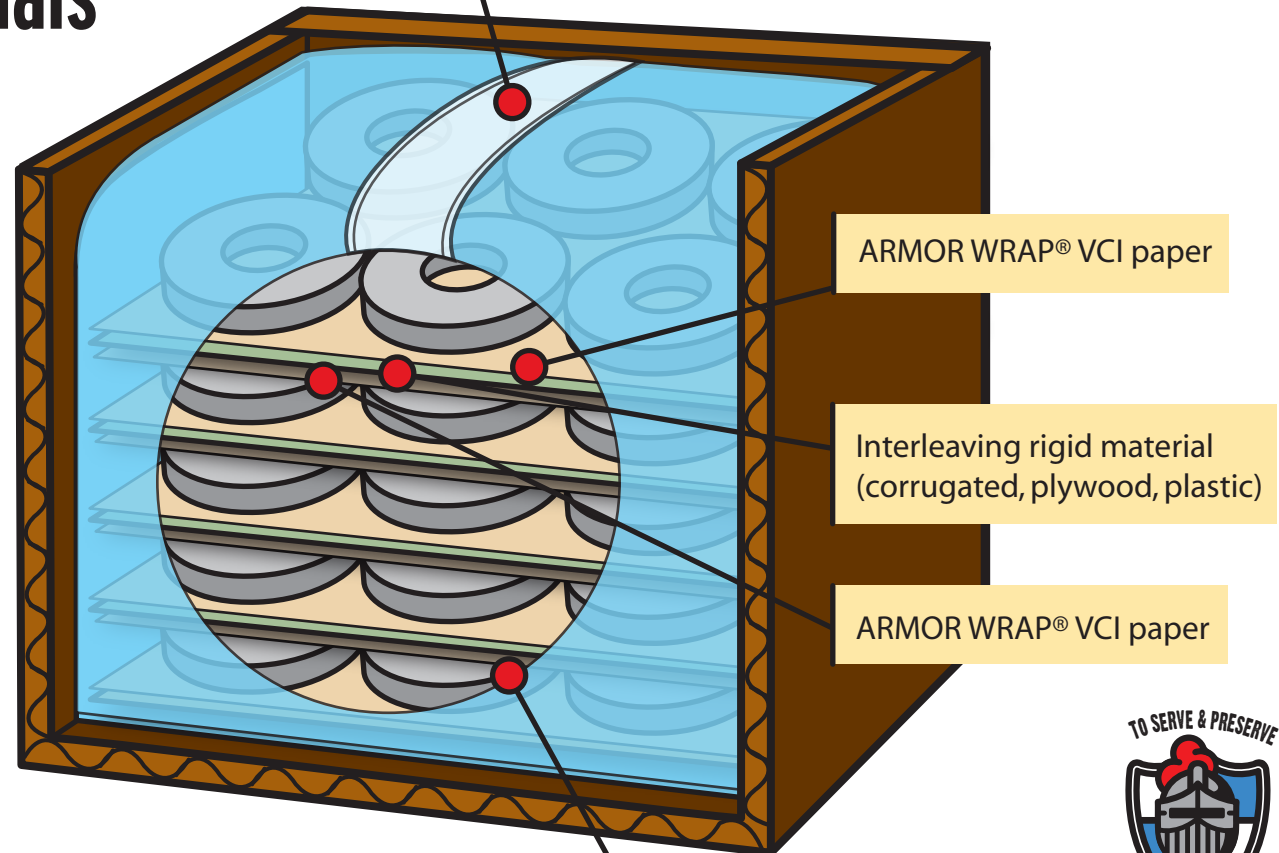

Separate Acidic Packaging Materials From Metal

ARMOR VCI packaging should be used to separate acidic and moisture absorbing materials such as wood and corrugated from the metal. Likewise, plastic dividers, although possibly inert, may contribute to corrosion by trapping moisture in the trays or contaminating the metal through the dirt on the plastic.

Please note that these recommendations are based upon "Best Practices" developed by ARMOR Protective Packaging® professionals in conjunction with our customers. Since every situation is different, ARMOR recommends conducting a "real life" test shipment for best results.

Be sure to seal top of bag completely.

ARMOR SHIELD® VCI Corrugated could be used an ideal substitute and labor/material savings versus VCI paper and interleaver used together.
