

INDIVIDUAL PACKAGING RECOMMENDATIONS

Small Individual Parts

Selecting between VCI paper and VCI bags is often a decision based on distribution cycle, packaging, production, line constraints, marketing, quantity, and ergonomics.

Place gear or individual metal part inside ARMOR Poly® VCI Bag and seal for best protection or wrap completely in ARMOR WRAP® VCI Paper.

Adequate sealing methods include heat seal, tape, staples or fold over. If parts are shipping export or require long term storage, a complete seal is necessary and folding our film over will be inadequate.

Please note that these recommendations are based upon “Best Practices” developed by ARMOR Protective Packaging® professionals in conjunction with our customers. Since every situation is different, ARMOR recommends conducting a “real life” test shipment for best results.
